

Disaster recovery is defined as the "differential process of restoring, rebuilding, and reshaping the physical, social, economic, and natural environment through pre-event planning and post-event actions" (Smith & Wenger referenced in Smith, 2009)

Addressing Risk and Vulnerability: Lessons Learned in Preand Post-disaster Recovery Planning

- Adopt a systems approach to analyzing risk and vulnerability
- Support the translation science into policy and practice
- Craft metrics responsive to multiples sectors across space and time

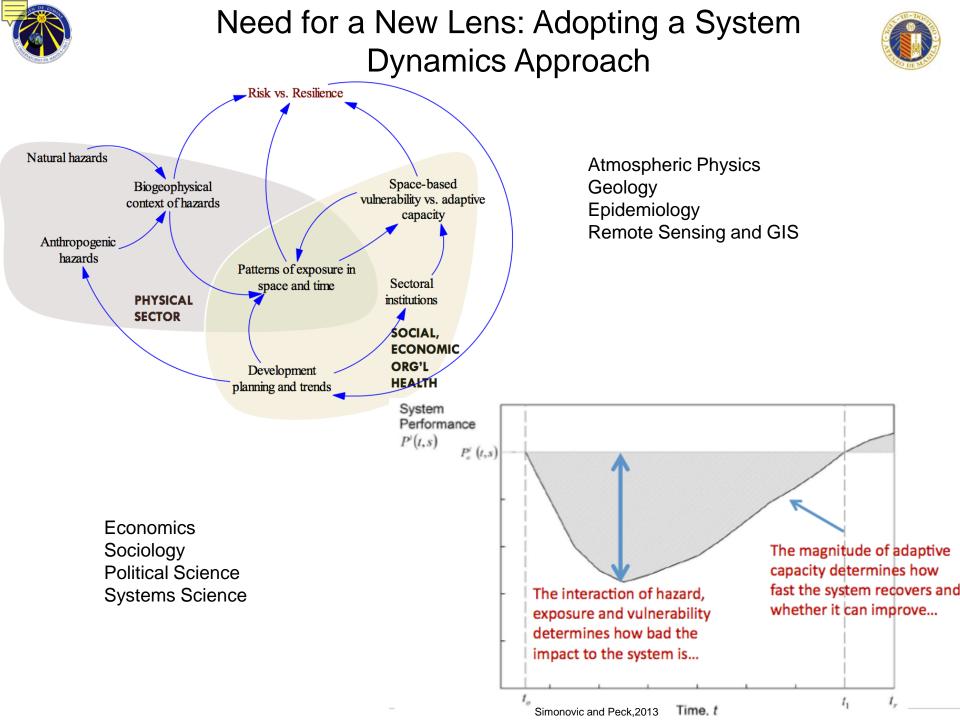

Risk Refracts. Vulnerability is prismatic. (Parthasarathy, 2008)

- 350 mm of rainfall in 6 hours
- Estimated 5 Million people affected and 500 dead and missing
- Combined with Typhoon Parma, World Bank estimated economic damages at US\$4.3Billion
- Meralco claimed losses of P830M
- Philippine Chamber of Commerce estimate P1Billion in business losses
- DPWH begins implementation of MM Flood Management Plan costing P351Billion in 2014

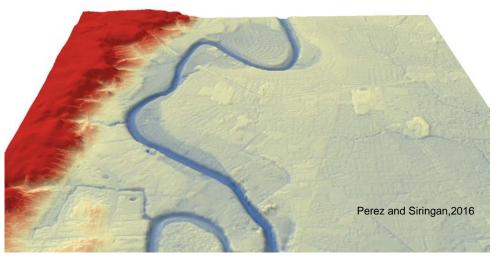

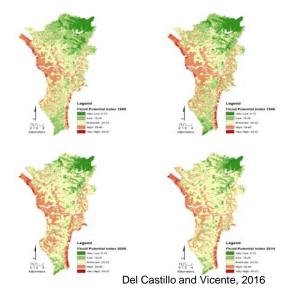

Physical Dimension: Analyzing the Dynamics of Hazards

Mapping the Impact of Geomorphic Changes of Flow

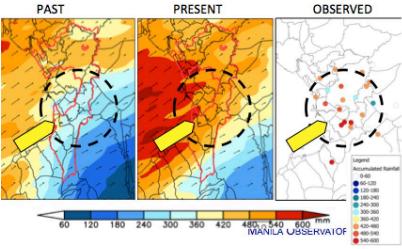

Land-use and Flood Potential

Validating Modeled Analysis vs. Observed Data

5-Day Accumulated Rainfall

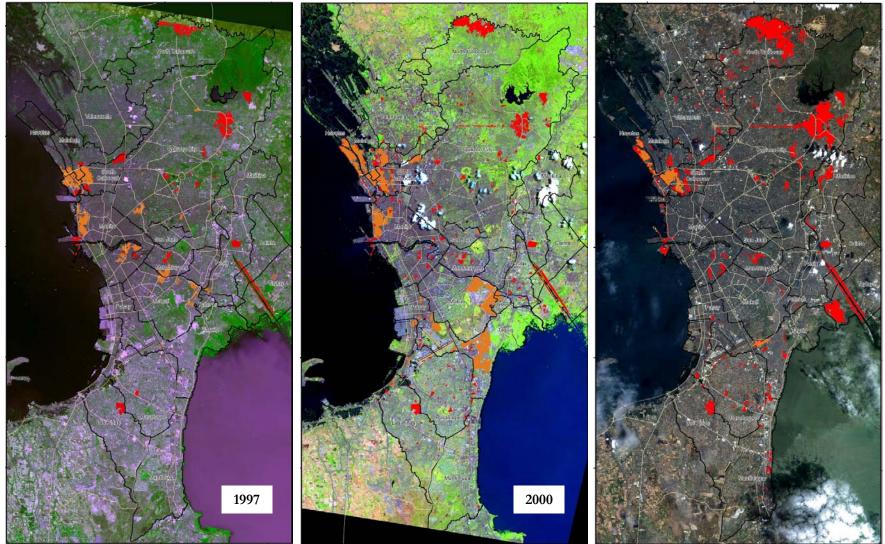

(17Aug - 22Aug 2013)

Gozo and Narisma,2016

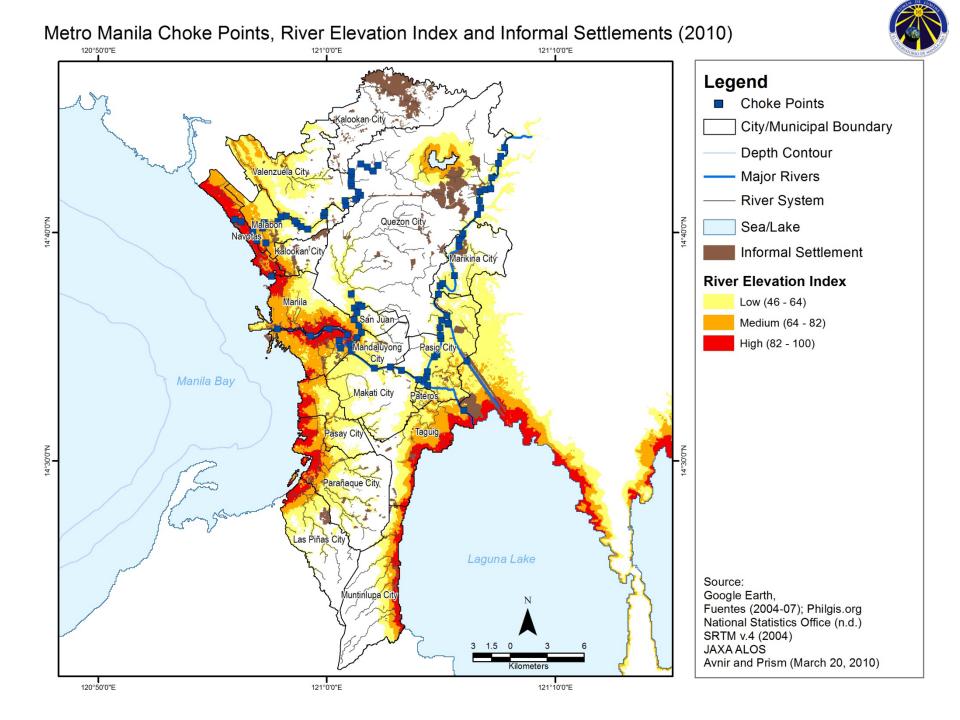

Tracking Exposure and Vulnerability over Space and Time

Comparison of results in study years 1997, 2000 and 2010. Red areas are informal settlements while the orange ones are mixed settlements.  Academe/Research Institutions

Regional/National Government Agencies
 Non-Government Organizations

National Disaster PREPAREDNESS PLAN 2015-2028

Capacity building, trainings, simulations, standards Lead: DILG in coordination with OCD Partners: AFP, BFP, CSOs, DepEd, DOH, DSWD, LGA, LGUs, PCG, PNP, PNRI, PRC, private sector

Capacity Building

Institutionalization including standard manual of operations Lead: DILG Partners: AFP, BFP, CSOs, DepED, DOH, DSWD, LGA, LGUs with public safety officers, PCG, PNP, PNRI, PRC

DRRM Localization

Local risk assessments, DRRM plans, contingency plans (multiple scenario-based preparedness and response plans): Lead: DILG in coordination with OCD Partners: DSWD, DOST, AFP, PNP, DepEd, PRC, Local DRRM Offices, CSOs and private sector IEC

Preparedness

Avert the loss of lives

and assets

DILG

(Coordinator)

IEC-related work: Lead: PIA Partners: AFP, CHED, CSOs, DepEd, DOH, MGB, NAMRIA, PAGASA, PHIVOLCS, PNP, PNRI, ULAP, private sector, media Partnerships arrangements, AADMER, NGO accreditation, national database of key players and stakeholders Lead: DILG Partners: DFA, CSOs and private sector, Leagues of local governments, national government agencies

Partnership

Securing continuity of essential services Lead: DILG and coordination with OCD Partners: DSWD, DOST, AFP, PNP, DepEd, PRC, LDRRMO, CSOs and private sector, LGUs

Continuity of Essential Services

Disaster response preparedness: Lead: DILG in relation to LGUs but DSWD in relation to national response actions Partners: DSWD and other members of the Response Thematic Area, DOST, AFP, PNP, DepEd, PRC, Local DRRM Offices, CSOs, private sector

Risk Assessment and Plans

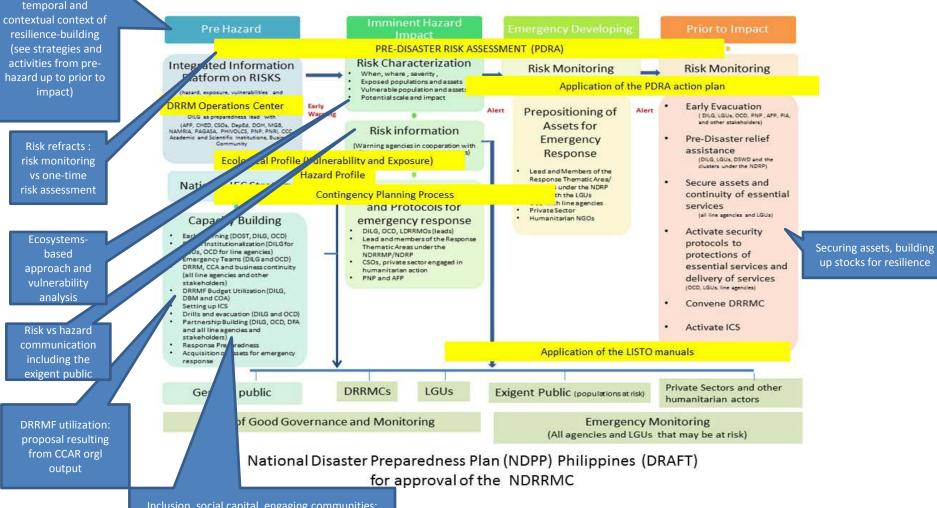

Preparedness for Emergency and Disaster Response

Addressing the

Build Back Stronger: Enhancing Preparedness and Strengthening Governance Structures

Inclusion, social capital, engaging communities: DRRM-CCA capacity and partnership bldg. See main text for details

FOUNDATION

_	Preparedness Phase	Relief Phase	Recovery Phase	Reconstruction Phase	Adaptation Phase
	Pre-disaster	Time: 0 to 1 month	Time: 1 to 6 months	Time: 6 to 24 months	Time: 12 to 36 months
LEADERSHIP AND GOVERNANCE	Readiness to respond to emergencies	Restore operational capacity	Addressing concerns of vulnerable groups	Re-establishment and re-building/ rehabilitation	Institutionalizing policies, systems and programs on disaster resiliency
	 Evidence-based all Hazards Local and Regional Integrated Risk Analysis : (H)Hazards x (E)Exposure x (V)Vulnerability Impacts to Health System identified and communicated to all staff and community members Health staff trained in basic life support Prepositioned relief goods, medical supplies and rescue equipment Located evacuation zones, centers, set routes and protocols 	 Immediate post- disaster assessment Availability of commodities to address basic needs Mobilization of medical services Availability of WASH facilities Debris and waste clearing Psychosocial interventions Disease control Restoration of logistics and communications Repair of health infrastructure Coordination mechanisms are established 	 Identified interventions Disease control Rebuilding health information systems Normalization of RHU operations Incentives program Established coordination mechanisms for rehabilitation Re-establish long- term food security Initiate training of leaders on disaster management and resiliency Re-establishment of hospital referral networks 	 Post-disaster assessment Risk re-mapping Re-institutionalize health information system Rehabilitation of public infrastructure, logistics, and communications Strengthened health systems Completion of leadership and governance trainings 	 Implementation, monitoring, evaluation of rehabilitation plans and post-disaster policies Operational disaster resiliency strategies and processes per health facility Climate- and disaster- resilient Health facilities j.i.e. situated and constructed based on risk-sensitive comprehensive land-use plan and zoning (e.g. no build/hazard zones) Resilience-based development and investment (budget) plans for health Cloud-based health information system

Emerging Framework of a Resilient Local Health System

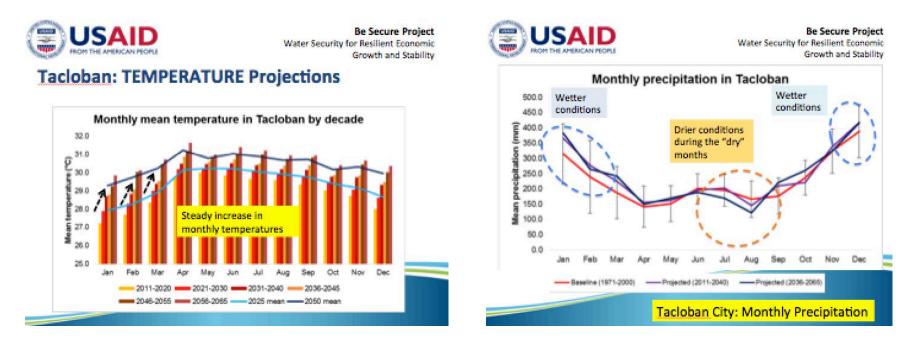

Resiliency-based approach to planning and development

Adaptation drives transformation in individuals, communities, institutions, and societies.

Sources: Framework based on inputs from Zuellig Family Foundation and Ms. Antonia Loyzaga, Executive Director, Manila Observatory

Postscript: Incorporating Climate Change Analysis in Recovery Planning for Tacloban City

- Rainfall is projected to increase in 2025and 2050
 *An increase in the frequency of days with intense rainfall is projected.
 *The wet months become wetter at higher rate than the "dry" months.
- The mean daily temperature in Tacloban City will increase by 1.4-2.4 degrees Centrigrade by 2025, and by 1.5-4.0 degrees Centigrade by 2050.
